

# O-ULTRASOUND PROJECT

## THE VISION

Those Pro Death people who favor murdering babies in their mother's wombs have one very big enemy here on earth other than prayer. There is something out there that will change the minds of 85% to 95% of the women who are contemplating abortion. There is a way that most of the baby dismemberment committed in this nation can be stopped. There is a way that we can help to eventually eliminate murdering babies completely. The identity of that powerful method is known as the ultrasound machine.

This device will let the mother-to-be actually hear her baby's heart beat which only proves to her that there is life within. This device enables a mother-to-be to actually SEE the life that is within her body in real time. She might see her baby move. She might see her baby kicking and not just feel those kicks. She might even be fortunate enough to see her baby sucking her thumb. After witnessing these miraculous events it becomes impossible to proceed with the plan to abort her baby. Only the coldest or most confused mothers-to-be can look upon these images and not feel a connection with her child.

The Vision of having an ultrasound machine near every planned parenthood and every other organization that either performs or promotes baby dismemberment is certainly an ambitious one. If it were easy, every area that needs one would certainly have one.

## THE ACTION

Now we come to the good part. The Knights of Columbus of Indiana can actually help destroy the abortion industry by taking part in the procurement of ultrasound machines. Supreme has agreed that any Council that raises enough money to pay for half of an ultrasound machine will see an equal amount donated by Supreme.

It is very difficult for one Council to raise that much money by itself. That is why the Indiana State Pro Life organization of the Knights of Columbus is proposing that all the Councils join together in raising the funds necessary to purchase one or more of these marvelous machines. By having all Councils working together they will not have to work against each other, drawing from the same populace. Your Indiana State K. of C. Culture of Life office is proposing that ALL Councils begin working together for the goal of purchasing ultrasound machines to be used near the abortions facilities in Indiana that as of yet do not have one. With 190 Councils in the State we could easily share in the cost of providing these much needed baby saving machines. There are already several of these machines needed in certain areas. Northwest Indiana needs 1 or 2. The Indianapolis area needs 2 and Bloomington could use 1, Lafayette is looking for one.

If each of the 190 Councils raised \$500 we could have a total of \$95,000 to purchase ultrasound equipment. Your Culture of Life staff has already negotiated with a company that will sell them to us for \$29,070 of which our half would be \$14,535. That means when Supreme matches our total we could buy 7 of these miraculous machines. This project will be ongoing until all PCCs will have one.

We have initiated fund raising and are looking for Councils to accept the responsibility of raising their \$500 (or more). **Is it easy? No, but it doesn't matter; we must do this!**
