

M- THE BABY IN MARY'S WOMB

On the weekend following the Annunciation, begin a 40-week story in your church bulletin describing the stages of the development of an unborn baby. Those in your parish can be shown that this developing child was just how Jesus Christ came onto this earth by posting Ultrasound pictures in the Narthex along with pictorial renditions of the various stages in a baby's development. The end of this developing period will be Christmas when The Baby was born. The Ultrasound pictures will only reinforce our belief that there is a baby in the womb, not a "mass of tissue".

Ultrasound pictures and renditions of babies at various stages can be obtained through your Pro Life Director at [prolife @ indianakofc .org](mailto:prolife@indianakofc.org)
